OBJECTIVE

Computer Science Engineering graduate with hands-on experience in Python, SQL, data analytics, Power BI, Tableau, ETL pipelines, and AI/ML projects. Strong foundation in programming, databases, machine learning, data analysis, and problem-solving, with an interest in applying technical skills to real-world challenges. Seeking an entry-level opportunity where I can contribute, learn, and grow professionally.

EDUCATION

B.E in Computer Science and Engineering	2022-2026
Chennai Institute of Technology	CGPA: 8.78 (87.8%)
Senior School Certificate Examination	2022
Sairam Vidyalaya	93.4%
Secondary School Examination	2020
Sairam Vidyalaya	93.8%

SKILLS

- Programming & Tools:** Python, SQL, Git, GitHub, Jupyter Notebook, Microsoft Excel
- Python Libraries & Frameworks:** Pandas, NumPy, Matplotlib, Scikit-learn, Flask, FastAPI
- Data Engineering:** PySpark, Spark SQL, ETL Pipelines, Data Transformation, Data Integration, Data Cleaning, Data Validation
- Databases & Cloud:** PostgreSQL, MySQL, MongoDB, Google BigQuery, AWS, Relational Databases, Data Modeling, SQL Query Optimization
- Data Analytics:** Exploratory Data Analysis, Statistical Analysis, Feature Engineering, Trend Analysis, KPI Analysis
- AI/ML & GenAI:** TensorFlow, Hugging Face Transformers, LLMs, Generative AI, Prompt Engineering, RAG, AI Agents
- AI Tools:** ChatGPT, Claude, GitHub Copilot, Cursor, Gemini
- Data Visualization:** Power BI, Tableau, DAX, Dashboard Development, KPI Reporting

PROJECTS

Energy Management and Optimization Platform

- Developed an AI-based Energy Management System using Python, LSTM, XGBoost, FastAPI, and PostgreSQL for energy consumption forecasting and monitoring.
- Implemented LSTM and XGBoost models to forecast energy demand by analyzing historical consumption, weather, tariff, and time-based factors, achieving 95.5% forecasting accuracy.
- Built Isolation Forest and Autoencoder models for anomaly detection and a Genetic Algorithm for tariff-aware energy optimization, integrated through REST APIs and a web frontend.

AI-Enhanced SaaS Growth Analytics Platform

- Developed an end-to-end SaaS analytics platform using Python, SQL, and Power BI to analyze 5,000+ users across subscriptions, payments, product usage, and support data.
- Implemented Random Forest for churn prediction, K-Means for customer segmentation, and NLP using NLTK for support ticket sentiment, issue categorization, and priority analysis.
- Built a 5-page Power BI dashboard with DAX to visualize MRR, ARR, CLV, churn, revenue trends, customer segments, retention, and AI-driven business recommendations.

Airline Operational Efficiency & Passenger Sentiment Analytics

- Designed a Star Schema Data Warehouse integrating flight, weather, airport, fuel, and passenger review datasets for centralized airline analytics and reporting.
- Built Python and SQL ETL pipelines for data extraction, cleaning, transformation, validation, and integration, while engineering KPIs for route efficiency, delays, fuel costs, and passenger sentiment.
- Developed a 3-page Power BI dashboard using DAX with interactive operational KPIs, delay trends, route analysis, fuel cost insights, and passenger sentiment, incorporating Random Forest-based delay predictions.

COURSES & CERTIFICATIONS

- Data Science with AI - Internshala
- Introduction to MongoDB, AI, and Vector Search- ICT Academy
- Google AI-ML Virtual Internship - EduSkills
- AWS Cloud Solutions Architect - Coursera
- Programming in Modern C++ - NPTEL
- Networking Essentials - Cisco
